SOUL, NATURE, AND GOD. According to the Vedanta philosophy, man consists of three substances, so to say. The outermost is the body, the gross form of man, in which are the instruments of sensation, such as the eyes, nose, ears, and so forth. This eye is not the organ of vision; it is only the instrument. Behind that is the organ.

Soul, in religion and philosophy, the immaterial aspect or essence of a human being, that which confers individuality and humanity, often considered to be synonymous with the mind or the self. In theology, the soul is further defined as that part of the individual which partakes of divinity and often is considered to survive the death of the body.

Principles of Natural Philosophy". Sadly, many contemporary philosophers would be hard-pressed to say just what natural philosophy (or philosophy of nature) is all about. Without question, the philosophy of nature has received relatively less attention than ethics and metaphysics for some time. In "Nature, the Soul, and God," Jean W. Rioux has brought together a number of important readings in natural philosophy, from the Pre-Socratic philosophers and Aristotle to the 19th-century entomologist Jean-Henri Fabre. Collectively, they present three ways in which one might conceive of the natural world in a pre-scientific reflection upon the way things are: either the classical materialism of Empedocles, Democritus, and Epicurus, the formalism of Plato, or the hylomorphic view espoused and defended by

Aristotle and Thomas Aquinas. In the sections following the consideration of nature are selections from these representative views concerning the immortality of the soul and the existence of God. Through the medium of philosophers both ancient and modern, Rioux makes the point that one's philosophical account of the natural world will have an impact upon how one regards human nature, as well as divinity itself. It all begins with nature.

While most people throughout history have believed that we are both physical and spiritual beings, the rise of science has called into question the existence of the soul. Many now argue that neurophysiology demonstrates the radical dependence, indeed, identity, between mind and brain.

Advances in genetics and in mapping human DNA, some say, show there is no need for the hypothesis of body-soul dualism. Even many Christian intellectuals have come to view the soul as a false Greek concept that is outdated and unbiblical. Concurrent with the demise of dualism has been the rise of advanced medical technologies that have brought to the fore difficult issues at both edges of life. Central to questions about abortion, fetal research, reproductive technologies, cloning and euthanasia is our understanding of the nature of human personhood, the reality of life after death and the value of ethical or religious knowledge as compared to scientific knowledge. In this careful treatment, J. P. Moreland and Scott B. Rae argue that the rise of these problems alongside the demise of Christian dualism is no

coincidence. They therefore employ a theological realism to meet these pressing issues, and to present a reasonable and biblical depiction of human nature as it impinges upon critical ethical concerns. This vigorous philosophical and ethical defense of human nature as body and soul, regardless of whether one agrees or disagrees, will be for all a touchstone for debate and discussion for years to come.

This collection of nine papers on topics relating to the title, brings together many of Geach's thoughts on such topics as resurrection, deductive proof of the existence of God, God's role in ethics, materialism, and the relation of time and prayer.

Humanity's creative role within the living pattern of nature • Explores important scientific discoveries that reveal the self-organizing intelligence at the heart of nature • Examines the idea of a living cosmos from its roots in the earliest cultures, to its eclipse during the Scientific Revolution, to its return today • Reveals ways to reengage our creative partnership with nature and collaborate with nature's intelligence For millennia the world was seen as a creative, interconnected web of life, constantly growing, developing, and restoring itself. But with the arrival of the Scientific Revolution in the 16th and 17th centuries, the world was viewed as a lifeless, clocklike mechanism, bound by the laws of classical physics. Intelligence was a trait ascribed solely to human beings, and

thus humanity was viewed as superior to and separate from nature. Today new scientific discoveries are reviving the ancient philosophy of a living, interconnected cosmos, and humanity is learning from and collaborating with nature's intelligence in new, life-enhancing ways, from ecological design to biomimicry. Drawing upon the most important scientific discoveries of recent times, David Fideler explores the self-organizing intelligence at the heart of nature and humanity's place in the cosmic pattern. He examines the ancient vision of the living cosmos from its roots in the "world soul" of the Greeks and the alchemical tradition, to its eclipse during the Scientific Revolution, to its return today. He explains how the mechanistic worldview led to humanity's profound sense of alienation, for if the universe only

functioned as a machine, there was no longer any room for genuine creativity or spontaneity. He shows how this isn't the case and how, even at the molecular level, natural systems engage in self-organization, self-preservation, and creative problem solving, mirroring the ancient idea of a creative intelligence that exists deep within the heart of nature.

Revealing new connections between science, religion, and culture, Fideler explores how to reengage our creative partnership with nature and new ways to collaborate with nature's intelligence.

in-matter for our relationships with the environment, with other people, even with ourselves Are rocks conscious? Do animals or plants have souls? Can trees feel pleasure or pain? Where in the great unfolding of life did consciousness first appear? How we answer such questions can dramatically affect the way we live our lives, how we treat the world of nature, and even how we relate to our own bodies. In this new edition of the award-winning *Radical Nature*, Christian de Quincey explores the “hard problem” of philosophy--how mind and matter are related--and proposes a radical and surprising answer: that matter itself tingles with consciousness at the deepest level. It's there in the cells of every living creature, even in molecules and atoms. Tracing the lineage of this idea through Western philosophy and science, he shows that it
