America had a radically different relationship with drugs a century ago. Drug prohibitions were few, and while alcohol was considered a menace, the public regularly consumed substances that are widely demonized today. Heroin was marketed by Bayer Pharmaceuticals, and marijuana was available as a tincture of cannabis sold by Parke Davis and Company. Exploring how this rather benign relationship with psychoactive drugs was transformed into one of confusion and chaos, *The Cult of Pharmacology* tells the dramatic story of how, as one legal drug after another fell from grace, new pharmaceutical substances took their place. Whether Valium or OxyContin at the pharmacy, cocaine or meth purchased on the street, or alcohol and tobacco from the corner store, drugs and drug use proliferated in twentieth-century America despite an escalating war on “drugs.” Richard DeGrandpre, a past fellow of the National Institute on Drug Abuse and author of the best-selling book *Ritalin Nation*, delivers a remarkably original interpretation of drugs by examining the seductive but ill-fated belief that they are chemically predestined to be either good or evil. He argues that the determination to treat the medically sanctioned use of drugs such as Miltown or Seconal separately from the illicit use of substances like heroin or ecstasy has blinded America to how drugs are transformed by the manner in which a culture deals with them. Bringing forth a wealth of scientific research showing the powerful influence of social and psychological factors on how the brain is affected by drugs, DeGrandpre demonstrates that psychoactive substances are not angels or demons irrespective of why, how, or by whom they are used. *The Cult of Pharmacology* is a bold and necessary new account of America’s complex relationship with drugs.

A provocative and eye-opening memoir, *High Price* will change the way we think about addiction, poverty, and race, as well as our policies on drugs. As Columbia University's first tenured African American professor in the sciences, groundbreaking neuroscientist Carl Hart has redefined our understanding of addiction. His controversial landmark research goes beyond the hype of the antidrug movement to shed new light on common ideas about race, poverty, and drugs, and to explain why current policies are failing. In *High Price*, Hart recalls his personal story—and though he escaped neighborhoods that were entrenched in systemic poverty, he has not turned his back on them. But balancing his former street life with his achievements today has not been easy—a struggle he reflects on publicly for the first time here.

I Want My Life Back is not a pretty story- but it's beautifully told and absolutely compelling. The book's cover features a portrait of author Steve Hamilton. You'd guess his age to be somewhere in his late 60's. Guess again. He's 39, and he has seen several lifetimes of hurt and failure. Raised by an alcoholic father, Hamilton learned early how alcohol can dominate every dynamic in family life. Later, alcohol and drugs dominated every aspect of his own life. This book is a moving and compelling portrait of the addicted life. Readers will learn how addiction comes to possess the mind, soul and body of its human prey. Readers will begin to understand why an addict like Hamilton can't quit the very thing that is destroying him. He leads readers to grapple with a mix of emotions: loathing, pity, sympathy, compassion, and ultimately, admiration. He has been clean and sober for more than a dozen years now, and he completely embraces the Twelve Step philosophy. A powerful story powerfully told, *I Want My Life Back* is Leaving Las Vegas with a happy ending

On March 16, 1998, the CIA’s Inspector General, Fred Hitz, finally let the cat out of the bag in an aside at a Congressional Hearing. Hitz told the US Reps that the CIA had maintained relationships with companies and individuals the Agency knew to be involved in the drug business. Even more astonishingly, Hitz revealed that back in 1982 the CIA had requested and received from Reagan’s Justice Department clearance not to report any knowledge it might have of drug-dealing by CIA assets. With these two admissions, Hitz definitively sank decades of CIA denials, many of them under oath to Congress. Hitz’s admissions also made fools of some of the most prominent names in US journalism, and vindicated investigators and critics of the Agency, ranging from Al McCoy to Senator John Kerry. The involvement of the CIA with drug traffickers is a story that has slouched into the limelight every decade or so since the creation of the Agency. Most recently, in 1996, the San Jose Mercury News published a sensational series on the topic, “Dark Alliance,” and then helped destroy its own reporter, Gary Webb. In *Whiteout*, Alexander Cockburn and Jeffrey St. Clair finally put the whole story together from the earliest days, when the CIA’s institutional ancestors, the OSS and the Office of Naval Intelligence, cut a deal with America’s premier gangster and drug trafficker, Lucky Luciano. They show that many of even the most seemingly outlandish charges leveled against the Agency have basis in truth. After the San Jose Mercury News series, for example, outraged black communities charged that the CIA had undertaken a program, stretching across many years, of experiments on minorities. Cockburn and St. Clair show how the CIA imported Nazi scientists straight

from their labs at Dachau and Buchenwald and set them to work developing chemical and biological weapons, tested on black Americans, some of them in mental hospitals. Cockburn and St. Clair show how the CIA ' s complicity with drug-dealing criminal gangs was part and parcel of its attacks on labor organizers, whether on the docks of New York, or of Marseilles and Shanghai. They trace how the Cold War and counterinsurgency led to an alliance between the Agency and the vilest of war criminals such as Klaus Barbie, or fanatic heroin traders like the mujahedin in Afghanistan. *Whiteout* is a thrilling history that stretches from Sicily in 1944 to the killing fields of South-East Asia, to CIA safe houses in Greenwich Village and San Francisco where CIA men watched Agency-paid prostitutes feed LSD to unsuspecting clients. We meet Oliver North as he plotted with Manuel Noriega and Central American gangsters. We travel to little-known airports in Costa Rica and Arkansas. We hear from drug pilots and accountants from the Medellin Cocaine Cartel. We learn of DEA agents whose careers were ruined because they tried to tell the truth. The CIA, drugs... and the press. Cockburn and St. Clair dissect the shameful way many American journalists have not only turned a blind eye on the Agency ' s misdeeds, but helped plunge the knife into those who told the real story. Here at last is the full saga. Fact-packed and fast-paced, *Whiteout* is a richly detailed excavation of the CIA ' s dirtiest secrets. For all who want to know the truth about the Agency this is the book to start with.
