Abstract. Agenesis of mandibular second premolar is reported to be 2.4 – 4.5%. The diagnosis can be set on at average 9 years of age. Early treatment in the form of extraction of the second primary molar and in some cases also the remaining three second premolars and comprehensive orthodontic treatment are often a good treatment solution.

Orthodontic Management Of Agenesis And Other Complexities ...

Orthodontic management of maxillary lateral incisors agenesis. The purpose of this article is to show the different modalities of treatment for upper lateral incisors agenesis. In daily practice, orthodontists often meet cases of upper lateral incisors agenesis. The two common treatment options are: space closure, using canines to substitute the missing lateral incisors, or space opening for future restorations.
