In mathematics, a partial differential equation (PDE) is an equation which imposes relations between the various partial derivatives of a multivariable function. The function is often thought of as an "unknown" to be solved for, similarly to how x is thought of as an unknown number, to be solved for, in an algebraic equation like $x^2 + 3x + 2 = 0$. However, it is usually impossible to write down explicit formulas for solutions of partial differential equations.

Partial differential equation - Wikipedia

A partial differential equation (PDE) is an equation involving functions and their partial derivatives; for example, the wave equation $(\partial^2 \psi) / (\partial x^2) + (\partial^2 \psi) / (\partial y^2) + (\partial^2 \psi) / (\partial z^2) = 1 / (v^2) (\partial^2 \psi) / (\partial t^2)$.

Partial Differential Equation -- from Wolfram MathWorld

Partial differential equation, in mathematics, equation relating a function of several variables to its partial derivatives. A partial derivative of a function of several variables expresses how fast the function changes when one of its variables is changed, the others being held constant (compare ordinary differential equation).

the vector equation (1) is said to be a system of partial differential equations for the unknown functions $u_1 \dots u_M$ or for the unknown vector $u = (u_1 \dots u_M)$. The highest order of the derivatives of the unknown functions entering the equation of the system is called the order of this system (equation).

Partial Differential Equations of Mathematical Physics ...

In Mathematics, a partial differential equation is one of the types of differential equations, in which the equation contains unknown multi variables with their partial derivatives. It is a special case of an ordinary differential equation. In this article, we are going to discuss what is a partial differential equation, how to represent it, its classification and types with more examples and solved problems.

Partial Differential Equations (Definition, Types & Examples)

The partial derivative of y with respect to t is written y_t or $\partial y / \partial t$; the partial derivative of y with respect to x is written y_x or $\partial y / \partial x$; and so on. Henceforth the simpler subscript notation will be used. D'Alembert's wave equation. D'Alembert's wave equation takes the form $y_{tt} = c^2 y_{xx}$.

This is a linear partial differential equation of first order for μ : $M\mu_y + N\mu_x = \mu(N_x - M_y)$. 5. Two C^1 -functions $u(x,y)$ and $v(x,y)$ are said to be functionally dependent if $\det \begin{pmatrix} \mu_x & \mu_y \\ v_x & v_y \end{pmatrix} = 0$, which is a linear partial differential equation of first order for u if v is a given C^1 -function. A large class of solutions is given by $u = H(v(x,y))$,

Partial differential equations (PDEs) are extremely important in both mathematics and physics. This chapter provides an introduction to some of the simplest and most important PDEs in both disciplines, and techniques for their solution. The chapter focuses on three equations—the heat equation, the wave equation, and Laplace's equation.

In mathematics, in the field of differential equations, a boundary value problem is a differential equation together with a set of additional constraints, called the boundary conditions. A solution to a boundary value problem is a solution to the differential equation which also satisfies the boundary conditions.

Partial Differential Equations PDEs are at the heart of many scientific advances. The behaviour of every material object in nature, with time scales ranging from picoseconds to millennia and length scales ranging from sub-atomic to astronomical, can be modelled by deterministic and stochastic PDEs or by equations with similar features.

For example, the Einstein equations describe the geometry of space-time and its interaction with matter. The dynamics of fluids and elastic solids are governed by partial differential equations that go back to Euler and Cauchy. Electro-magnetic waves including the propagation of light in various media are modeled by Maxwell's equations.
