In linguistics, grammatical relations are functional relationships between constituents in a clause. The standard examples of grammatical functions from traditional grammar are subject, direct object, and indirect object. In recent times, the syntactic functions, typified by the traditional categories of subject and object, have assumed an important role in linguistic theorizing, within a variety of approaches ranging from generative grammar to functional and cognitive theories. Many modern theo

The syntactic roles (grammatical relations) of subject and object are semantically irregular but their syntactic behavior is claimed to be syntactically unified, thereby justifying the existence of formal syntactic roles independent of meaning. Subject and object are certainly polysemous categories semantically, but syntactically they are no simpler.

By grammatical relations (such as subject, direct object, indirect object) we understand structurally encoded standard syntactic relations between the constituents of a clause, in particular between the predicate and noun phrases. Grammatical relations can be characterized in terms of the meanings they express, in terms of their formal means of expression, and in terms of their syntactic functions.

Grammatical Relations Grammatical Relations (GRs) are relations between words in sentences. These are much more clearly defined than semantic roles, since they involve human interaction with communicated content. Because our minds are finite, we must always "carve out" (i.e., create) bounded categories from inherently unbounded semantic space.

This article presents an overview of the basic issues concerning the relationship between case, grammatical relations, and semantic roles such as agent and patient. In most approaches, semantic roles are directly linked to abstract grammatical relations for the core arguments of the clause. Cases are considered to be a surface expression of grammatical relations.

1. Grammatical relations past and present Traditionally, the term 'grammatical relation' (GR) refers to the morphosyntactic properties that relate an argument to a clause, as, for example, its subject or its object. Alternative terms are 'syntactic function' or 'syntactic role', and they highlight the
