Therefore, the inverse of the hydrogen ion concentration represented as a common logarithm is used as the pH. For a neutral solution, the pH is 7 because $[H^+] = 10^{-7}$; for a 1/10 mol/L HCl solution, the pH is 1 because $[H^+] = 10^{-1}$; and for a 1/10 mol/L NaOH solution, the pH is 13 because $[H^+] = 10^{-13}$.

Online Library Ph Analysis Answers

It is a measure of how many excess H^+ ions there are in a solution. The pH scale runs from 0 to 14, with 0 representing the highest concentration of hydrogen ions. Acidic substances have a pH below 7, while alkaline substances (bases) have a pH above 7. Pure water has a pH of 7 and is considered neutral.

Student Exploration: pH Analysis

Answer : PH is a measure of the acidity and alkalinity properties of an aqueous solution, which are determined by the concentration of hydrogen ions (H^+) in the solution. Water has the molecular formula of H_2O and almost always exists in the stable molecular state of H_2O .
