Over 90 exercises are organized into 22 chapters that are suitable for a two- to four-hour lab period. The Eleventh Edition incorporates inquiry-based components, including an "Explain This" feature, which asks you to thoughtfully consider the aim of each exercise that they perform, and also contains a new scientific inquiry and graphing Appendix - making this a perfect complement to any book. Instructors may pair the lab manual with other technologies such as PhysioEx™ 9.1, PowerLab, Vernier, and BIOPAC to effectively engage you. This impressive collaboration between Woodman and Tharp gives instructors the opportunity to truly foster critical thinking skills and add a dynamic element to their laboratory courses.

Science students are expected to produce lab reports, but are rarely adequately instructed on how to write them. Aimed at undergraduate students, Successful Lab Reports bridges the gap between the many books about writing term papers and the advanced books about writing papers for publication in scientific journals, neither of which gives much information on writing science lab reports. The first part guides students through the structure as they write a first draft. The second part shows how to revise the report and polish science writing skills as the student continues to write science lab reports.
