Postal Systems in the Pre-Modern Islamic World by Adam J ...

It was probably in China that a posthouse relay system was first developed and was brought to a high state of development under the Mongol emperors. The great Persian Empire of Cyrus in the 6th century bc also employed relays of mounted messengers, served by posthouses. The system was favourably described by the Greek historians Herodotus

Review of A. J. Silverstein, Postal Systems in the Pre ...

The courier system was the first organized delivery system for written information that we know of. But it was not yet used for letters and messages between parties besides pharaoh. In Ancient Persia, during the period of 550 BC to 521 BC, a true postal system was developed in Assyria. It is disputed whether it was Cyrus the Great or his successor Darius I, who was responsible. The postal system of Persia was operated by a series of stations.

Early History of Postal Systems | Salt Lake Mailing and ...

In the course of these 200 years there were two postal systems for London, the General Post and the Penny Post. These systems were run concurrently, but had different offices, staff, accounting and of course, different postal markings. It is such a large section that we have split them into smaller sections on the following pages.

British Postal History

A schoolmaster from England, Rowland Hill (1795-1879), invented the adhesive postage stamp in 1837, an act for which he was knighted. Through his efforts, the first postage stamp system in the world was issued in England in 1840. Hill created the first uniform postage rates that were based on weight, rather than size.

History of Mail and the Postal System - ThoughtCo

Pre-adhesive mail also called pre-stamp mail is mail used before the issuance of the Penny Black and Two pence Blue stamps on 6 May 1840 in the United Kingdom of Great Britain and Ireland, and in other countries, mail used prior to the postal authority adopting their own adhesive labels. The material can range from court and government letters before official public mail services to distinctive town-marks worldwide.

The Early American Postal System. Early American Map of Postal Road Between Boston and New York City. In the early American colonies, there was no organized postal service until the late 17th century, and even then it operated much differently than it does today. Before this time, the Americans relied on friends, merchants, and sometimes even the Native American population to carry their mail for them.

Early American Postal Service

The mail or post is a system for physically transporting postcards, letters, and parcels. A postal service can be private or public, though many governments place restrictions on private systems. Since the mid-19th century, national postal systems have generally been established as a government monopoly, with a fee on the article prepaid.Proof of payment is usually in the form of an adhesive ...

Pre- and post- implementation reviews Before implementing a new business system it is worth assessing what business needs and requirements the new system should satisfy as well as the available resources. Then, on the basis of the information collected, the proper application and supplier can be selected. Meanwhile, the

Pre- and post-implementation reviews

Cooper provides evidence that the pre-18th century English postal service was more reliable and efficient than has been supposed. As far as terminology is concerned, a post road was a road with stations for furnishes horses for postriders and mail coaches, and travelers. A post stage, source of the word postage, was one of these stations.

The English postal system and early modern communication ...

Postal charging replaces the charging process in appropriate cases, ie, where the person is released on unconditional police bail awaiting a charging decision. Prosecution In all aspects of managing offenders, officers should be familiar with the requirement to consult CPS prosecutors to obtain early legal advice and decisions on charges.

Adam Silverstein's book offers a fascinating account of the official methods of communication employed in the Near East from pre-Islamic times through the Mamluk period. Postal systems were set up by rulers in order to maintain control over vast tracts of land. These systems, invented centuries before steam-engines or cars, enabled the swift circulation of different commodities - from letters, people and horses to exotic fruits and ice. As the

correspondence transported often included confidential reports from a ruler's provinces, such postal systems doubled as espionage-networks through which news reached the central authorities quickly enough to allow a timely reaction to events. The book sheds light not only on the role of communications technology in Islamic history, but also on how nomadic culture contributed to empire-building in the Near East. This is a long-awaited contribution to the history of pre-modern communications systems in the Near Eastern world.
