~~Introduction to Data Warehousing and Business Intelligence~~

The need of data warehouse is illustrated in figure. Problems of Data Warehousing. The problems associated with developing and managing a data warehousing are as follows: Underestimation of resources of data loading. Some times we underestimate the time required to extract, clean, and load the data into the warehouse.

rearrange and consolidate large volumes of data over many systems, thereby providing a new unified information base for business intelligence. The process of extracting data from source systems and bringing it into the data warehouse is commonly called ETL, which stands for extraction, transformation, and loading. Note that ETL refers to a broad process, and not three well-defined steps.

Ralph Hughes MA, PMP, CSM, in *Agile Data Warehousing for the Enterprise*, 2016. Summary. Traditional enterprise data warehousing projects easily fall into a negative feedback loop where fear of failure drives companies to instill so many checks and controls on the development process that delivery of value to business stakeholders slows to a crawl. To some extent these process
