### **Problem Set 3 - MIT OpenCourseWare**

Problem Set 3. Due 3/10/97. Theory. 1. Suppose that a consumer's indirect utility function is given as follows:  $V(P_x, P_y, I) = - (P_x + \sqrt{P_x P_y}) / I - (P_y + \sqrt{P_x P_y}) / I$  (a) What are the uncompensated demands  $d_x(P_x, P_y, I)$  and  $d_y(P_x, P_y, I)$ ? (b) What is the expenditure function  $E(P_x, P_y, U_0)$ ? (c) What are the compensated demands  $h_x(P_x, P_y, U_0)$  and  $h_y(P_x, P_y, U_0)$ ? 2.

## **Problem Set 3 - MIT**

Problem Set 3: Expressivo In this problem set, we will explore parsers, recursive data types, and equality for immutable types. Compared to the previous problem sets, we are imposing very few restrictions on how you structure your code.

## **Problem Set 3: Expressivo - MIT OpenCourseWare**

In this problem we have two boxes, of different masses, which are rotating around a shaft with the same angular velocity,  $\omega$ . Box 1 is at a distance  $d$  from the axis of rotation and Box 2 is at a distance  $2d$  from the axis. The tension in string A is labelled in my diagram as  $T_a$ . The tension in string B is labelled as  $T_b$ . The important thing to remember about tension in a string is that it cannot ...

## MIT Problem Set 3 - Circular Motion Question 4

On several parts of this problem set, the classes and methods will be yours to specify and create, but you must pay attention to the PS3 instructions sections in the provided documentation. You must satisfy the specifications of the provided interfaces and methods.

## Problem Set 3: Expressivo - MIT

18.101 PROBLEM SET 3 due October 17th 1pm You can collaborate with other students when working on problems. However, you should write the solutions using your own words and thought. Problem 1. Find the total length  $\int_0^1 \sqrt{1 + (x'(t))^2} dt$  of the integral curve  $x(t) : \mathbb{R} \rightarrow \mathbb{R}$  to the initial value problems  $\frac{d}{dt} x(t) = \cos x(t)$  and  $x(0) = 0$ . Problem 2.

and  $B_i(x) = \frac{1}{2} \int_{-\infty}^{\infty} e^{i(xz+1/3 z^3)} dz + \text{c.c.}$  (1.1) are both solutions of the Airy equation  $y'' = xy$ , where c.c. denotes the complex conjugate. Show that the above are equivalent to:

### **Problem Set # 3, 18.305. MIT (Fall 2005)**

Problem sets are designed to be completed in at most 3 hours; the time is monitored through student reports. Solutions to the following Problem Sets are not available to the general public, as the assignments took substantial effort to compose—often 4-6 hours per problem—so it is essential that the course staff be able to re-use problems in later terms.
