Critical Path Method (CPM) and Performance Evaluation and ReviewTechnique (PERT) are widely recognized as the most effectivemethods of keeping large, complex construction projects onschedule, under budget, and up to professional standards. But thesethods remain underused because they are poorly understood and,due to a host of unfamiliar terms and applications, may seem morecomplicated than they really are. This encyclopedia brings together, in one comprehensive volume, allterms, definitions, and applications related to the time and costmanagement of construction projects. While many of these termsrefer to ancient and venerable building practices, others haveevolved quite recently and refer specifically to modernconstruction and management techniques. Sources include hundreds ofprofessional books, trade journals, and research publications, aswell as planning and scheduling software vendor literature. The detailed glossary of all applicable terms includes across-referenced listing of examples that describe real-worldapplications for each term supplied. An extensive bibliographycovers all applicable books, articles, and periodicals available onproject planning, scheduling, and control using CPM and relatedsubjects. This book is an important quick reference and desktop informationresource for construction planners, schedulers, and controllers, aswell as civil engineers and project managers. It is also theultimate research tool for educators, students, or anyone who seeksto improve their understanding of the management of modernconstruction projects.

Real-life case studies show how the theory can be adapted to work 'in the field'. This approach means that techniques can be fully understood and appreciated. Useful summaries clarify the use of all the techniques used to manage a project. The advantages of using network analysis and earned value analysis when planning a project are explained. The latest project management systems that use critical path methods are described and a detailed examination of one widely used system illustrates the general characteristics of modern project planning software. Two well-known computer programs are described in detail. Albert Lester was a project manager with Tarmac Construction and Foster Wheeler Power Products managing large multi-discipline petrochemical and power generation projects. He has been a compiler and is an examiner for the APMP certificate and lectures on project management as well as assessing for APM many project management courses. * A comprehensive resource for project managers * Written by a well-known and authoritative author * A recommended resource for the Association of Project Management courses
