Self Healing Application In Engineering

3.1 Incorporation of self-healing features within a secondary bondline As discussed previously in the 3M meeting in Brussels, the healing capability of self-healing fibre reinforced polymer (FRP) composites has to be adapted to a certain type of damage event.

Self-Healing - Application in Engineering

Rapid self-healing hydrogels based on chemically crosslinked polymeric systems have been demonstrated (Phadke et al., 2012) for various smart self-healing applications. A flexible side-chain molecule that contains just the right size and number of water-soluble and water-repelling chemical groups to stretch across an interface and bond with the side chains of the nearby hydrogel has been engineered.

Rarely, an entire service or region may experience a disruption, but even those must be planned for. Therefore, design an application to be self healing when failures occur. This requires a three-pronged approach: Detect failures. Respond to failures gracefully. Log and monitor failures, to give operational insight.

This method is known as bio-mineralization technique, which gives promising results to self-healing concrete. The application comes in different forms. There is a spray which can be applied to existing construction for repair of small cracks (0.5-0.8mm wide) or a mixture poured while mixing the concrete before construction.

Self-Healing Concrete: The Future of Construction ...

Although research on self-healing materials is relatively new, a few commercial self-healing materials, like the Reverlink™ elastomer, are manufactured by Arkema (Cordier et al., 2008), and there are many potential applications of self-healing composites (e.g., resistant fabrics, resealing tires and long-life batteries). Self-healing coatings for corrosion protection or barrier protection have found early commercial applications.
