Soap Api Developer Guide

Introducing SOAP API

Salesforce provides  
programmatic access to your  
org's information using  
simple, powerful, and secure  
application programming  
interfaces. To use this  
document, you should have a  
basic familiarity with  
software development, Web  
services, and the Salesforce  
user interface.

The API also uses several error handling objects. If an error occurs during a SOAP request, the API returns a SOAP fault message. The message contains different content, depending on the type of error: If an error affects the entire request, an API Fault Element, is returned, containing an ExceptionCode and the associated error message text.

In the world of SOAP, the client is a computer program that asks a server (another computer program) to execute a method (sometimes called a web service). In CIC configuration, HTTP requests are received by SOAP Listener— an ISAPI DLL that runs on an IIS web server. SOAP Listener passes requests to the CIC Notifier subsystem for processing.
