Documentation management - lets users easily create templates and render documents. Functional requirements documents... Spreadsheet software -- allows users to add columns as needed. In addition, it's not ...

~~What is a Functional Specification Document?~~

A functional specification in systems engineering and software development is a document that specifies the functions that a system or component must perform. The documentation typically describes what is needed by the system user as well as requested properties of inputs and outputs. A functional specification is the more technical response to a matching requirements document, e.g. the Product Requirements Document "PRD". Thus it picks up the results of the requirements analysis stage. On more

~~Functional specification - Wikipedia~~

Functional specification documentation is intended for all project stakeholders. It tells developers what features they need to build and how, but it's a good idea to share it with the entire team for better transparency and collaboration. Writing a functional specification

~~What is a Functional Requirement? Specification, Types ...~~

The purpose of a functional specification is to define the requirements to be implemented by the software solution. Now, as business analysts, not all aspects of our solutions are software-based. A perfectly legitimate solution to a business problem could involve a business process change, organizational change, or even a configuration adjustment.

~~What Goes Into a Functional Specification?~~

A software requirements specification (SRS) is a description of an agreement between the customer and the supplier/contractor about the functional and non-functional requirements of the software system to be developed. This document will be used as a reference base for the development process.

~~SRS — Software Requirement Specifications with Template~~

In the world of software development, a functional specifications document is a set of guidelines that detail how a particular component of a software should function. It is different from a product requirements document (PRD) in that a PRD lists the features of a software.

~~A Practical Approach to Functional Specifications Documents~~

A functional spec is a document detailing the client's requirements for an application. Typically, the client has a high level view of what they want the application to do and it is the job of the Functional Spec to take that high level view and provide the details of what it does, how it is used, and what it looks like.

~~Functional Specification Documents~~

A Software Requirements Specification (SRS) is a document that describes the nature of a project, software or application. In simple words, SRS document is a manual of a project provided it is prepared before you kick-start a project/application. This document is also known by the names SRS report, software document.

~~Software Requirements Specification document with example ...~~

Giving a basis for future fixes and improvements. An SRS record can act out as an FSD (Functional Specification Document) or PRD (Product Requirement Document). FSD is responsible for the software part of a new project while PRD contains information about the hardware part. What Are the Difficulties of Using the SRS?
