Soil Mechanics Laboratory Tests Bing

Soil mechanics laboratory testing and experimentation has now become an integral part of most construction projects for soil characterization, compaction control, seepage analysis, settlement analysis, design of foundations, retaining walls, dam, and slope stability. This course will start with reviewing basic tests for determining index properties of soils including soil gradation, Atterberg limits, and hydrometer analysis.

The testing procedure to quantify the critical soil properties associated with soil consolidation is the Oedometer Test. The term "Oedometer" derives from the Ancient Greek language and means "to swell". The test is one of the most commonly conducted, and important, laboratory tests in geotechnical engineering.

Soil Consolidation and Oedometer Test | Geoengineer.org

The laboratory staff performs the spectrum of geotechnical testing from routine index testing to the development and implementation of state of the art test procedures. Testing is performed in a 10,000 square foot temperature controlled facility that is equipped with up to date equipment and data acquisition instrumentation.
