10 o C S min E S max S max = geostationary satellite position with maximum slant range to

earth station S min = geostationary satellite position with minimum slant range to earth

station E = earth station C = center of earth r e = earth radius = 6378.137 km = CE h s =

height of satellite = ES min = 35,786.03 km 2- 12 Part (i) By the law of sines, CS max /sin100 o

= CE/sine giving (35,786.03 + 6378.137)/sin100 o = 6378.137/sin and thus sin = (sin100 o

6378.137)/42,164.167 = 0.1489710 and so ...

collection hosts in multiple countries, allowing you to get the most less latency time to download any of our books like this one. Page 1/3

Satellite Communications Dennis Roddy Solution Manual

The highest Doppler shift would be observed in the plane of the satellite at the orbital height of the satellite: the satellite would be coming directly at the observer or directly 2- 3 away from the observer. The maximum Doppler shift would therefore be the sum of these two values. The orbital velocity was calculated in question 2 as 7,713.066 m/s. Using equation (2.44a), $f / f_T = V_T / v_p$, where f is the Doppler frequency, f_T is the frequency of the transmitter at rest, V_T is the component of ...
