YOUR ESSENTIAL GUIDE TO SPIROMETRY

Spirometry is pivotal to the screening, diagnosis, and monitoring of respiratory disease and is increasingly advocated in primary care practice. Earlier this year, CHEST published a comprehensive supplement entitled "Strategies in Preserving Lung Health and Preventing COPD and Associated Diseases." 1.

Spirometry in Primary Care Practice - CHEST

Spirometry is one of the most common of the pulmonary function tests (PFTs), measuring lung function, specifically the amount (volume) and/or speed (flow) of air that can be inhaled and exhaled. Spirometry is an important tool used, in combination with the clinical picture, for diagnosing and assessing conditions such as asthma, COPD, pulmonary fibrosis and cystic fibrosis.

Spirometry | Primary Care Respiratory Society

Spirometry is a relatively risk free procedure. However, blowing out with force can raise intra-cranial, intra-ocular, intra-thoracic and intra-abdominal pressure. It is therefore important to check that the patient can put in the effort of blowing. There are, however, certain circumstances when spirometry should not be performed (see Box,

right).

Practice - A comprehensive guide to the accurate ...

Spirometry is invaluable as a screening test of general respiratory health, similar to BP measurement in cardiovascular disease. It is a reliable method of diagnosing and differentiating between obstructive airways disorders (e.g. COPD, asthma) and restrictive diseases (where the size of the lung is reduced, e.g. fibrotic lung disease).

Spirometry: Performance and Interpretation A Guide for ...

Spirometry is a method of assessing lung function by measuring the volume of air that the patient is able to expel from the lungs after a maximal inspiration. It is a reliable method of differentiating between obstructive airways disorders (e.g. chronic obstructive pulmonary disease, asthma) and restrictive diseases (e.g. fibrotic lung disease).

Spirometry Interpretation | Obstructive vs Restrictive ...

Results. Indications on spirometry were released by the Chinese Task force, the American Thoracic Society, the European Respiratory Society, the Thoracic Society of Australia and New Zealand, the Société de Pneumologie de Langue Française, the Spanish Societies (Sociedad Espanola de Neumologia y Cirugia Toracica, Sociedad Espanola de Alergologia e Inmunologia Clinica, Asociacion de ...

Practical considerations for spirometry during the COVID ...

Spirometry is used to measure lung volume and air flow; Spirometry can be used as a baseline investigation to refine a diagnosis or monitor disease or treatment and for reversibility testing; New guidance lays out three levels of training: for those who only perform spirometry, those who only interpret spirometry results, and those who do both

Spirometry: technical overview and new training and ...

Diagnostic Spirometry in Primary Care (Primary Care Commissioning [PCC], 2013), which is endorsed by the British Thoracic Society (BTS), the Primary Care Respiratory Society (PCRS), and the Association for Respiratory Technology and Physiology (ARTP). This guide provides a summary of spirometry standards as established by Miller et al (2005).
QUALITY

Using quality assured spirometry to support diagnosis

Spirometry is the term given to the basic lung function tests that measure the air that is expired and inspired. There are three basic related measurements: volume, time and flow. Spirometry is objective, noninvasive, sensitive to early change and reproducible.

near connections listings. This is just one of the solutions for you to be successful.

Spirometry In Practice British Thoracic Society

Spirometry is an objective test and is one of the few effort-dependent tests undertaken in primary care. To achieve the best possible result, the operator must give clear instructions and 'encouragement' to the patient. Suboptimal effort will give a technically unacceptable result. The clarity of instruction is vital.

Spirometry - Primary Care Respiratory Academy

Spirometry is performed to objectively assess individuals' pulmonary function. It enables measuring the effect of a disease on lung function, monitoring its course or the result of therapeutic interventions, assessing preoperative risk and prognosticating many pulmonary conditions. Conversely, spirometry may be contraindicated (6).

Spirometry in primary care - Canadian Thoracic Society

Measurements and reversibility tests were performed according to the American Thoracic Society (ATS) Guidelines for spirometry measurements. Result: Normal spirometric pattern was found in only...
