The Living Environment Laboratory Study Guide

A living lab, or living laboratory, is a research concept, which may be defined as a user-centered, iterative, open-innovation ecosystem, often operating in a territorial context (e.g. city, agglomeration, region or campus), integrating concurrent research and innovation processes within a public-private-people partnership.

Living lab - Wikipedia

Any student-led research and projects aiming to improve the sustainability of the University and create tangible impact could make use of the Living Lab for access to data, contacts, information, or funding* (subject to approval), in the areas of, for example: carbon reduction and energy efficiency. sustainability in the built environment.

Academic projects | Environment and Energy

A national US-wide cohort study on nurses' health in 2000 and 2008 showed a significant decrease in mortality of women who live in green areas, estimated by satellite imagery with NDVI vegetation index [JAM 16]. Another study on health data in 15 US states from 1990 to 2007 measured the effects of deforestation induced by a forest pest [DON 13]. Mortality from cardiovascular and respiratory diseases is correlated with loss of trees due to the impact of this forest disease.
