To my mind, The Power of Unreasonable People ranks with David Bornstein's seminal work, How to Change the World, as a point of entry into this fascinating, and increasingly important, realm. The field of social entrepreneurship, still early in its development after Bill Drayton first gave the concept prominence early in the 1980s with the launch of Ashoka, is rife with disagreement.

Learn from Today ' s Most Successful Workforce Analytics Leaders
Transforming the immense potential of workforce analytics into reality isn ' t easy. Pioneering practitioners have learned crucial lessons that can help you succeed. The Power of People shares their journeys—and their indispensable insights. Drawing on incisive case studies and vignettes, three experts help you bring purpose and clarity to any workforce analytics project, with robust research design and analysis to get reliable insights. They reveal where to start, where to find stakeholder support, and how to earn “ quick wins ” to build upon. You ' ll learn how to sustain success through best-practice data management, technology usage, partnering, and skill building. Finally, you ' ll discover how to earn even more value by establishing an analytical mindset throughout HR, and building two key skills: storytelling and visualization. The Power of People will be invaluable to HR executives establishing or leading analytics functions; HR professionals planning analytics projects; and any business executive who wants more value from HR.

This book is a searching study of the meaning, maintenance, and results of liberty.

Never have so many possessed the means to be so lethal. The diffusion of modern technology (robotics, cyber weapons, 3-D printing, autonomous systems, and artificial intelligence) to ordinary people has given them access to weapons of mass violence previously monopolized by the state. In recent years, states have attempted to stem the flow of such weapons to individuals and non-state groups, but

their efforts are failing. As Audrey Kurth Cronin explains in *Power to the People*, what we are seeing now is an exacerbation of an age-old trend. Over the centuries, the most surprising developments in warfare have occurred because of advances in technologies combined with changes in who can use them. Indeed, accessible innovations in destructive force have long driven new patterns of political violence. When Nobel invented dynamite and Kalashnikov designed the AK-47, each inadvertently spurred terrorist and insurgent movements that killed millions and upended the international system. That history illuminates our own situation, in which emerging technologies are altering society and redistributing power. The twenty-first century "sharing economy" has already disrupted every institution, including the armed forces. New "open" technologies are transforming access to the means of violence. Just as importantly, higher-order functions that previously had been exclusively under state military control - mass mobilization, force projection, and systems integration - are being harnessed by non-state actors. Cronin closes by focusing on how to respond so that we both preserve the benefits of emerging technologies yet reduce the risks. Power, in the form of lethal technology, is flowing to the people, but the same technologies that empower can imperil global security - unless we act strategically.

This book explores how homeowners, co-ops, nonprofit institutions, and other entities are putting power in the hands of local communities through distributed energy programs and energy-efficiency measures. Using examples from around the nation, Pahl explains how to plan and launch community-scale energy projects to harvest energy.

People are the problem. They're always the problem. If a business person goes home frustrated, if they talk with their significant other about it, if they lay awake at night stewing about it, inevitably the problem is some person at work--a colleague, subordinate, or boss. Handling people issues is every leader's major headache. It's what takes up the majority of their time and--more important--the bulk of their

head space. Every leader can and must develop this most important of all management skills. The Power of People Skills will teach you that there's one primary difference between a great culture and a poor one: a great culture insists on having star players in every key seat, and a poor culture tolerates under performers. In this powerful book, you will learn how to: Make the people decisions that can double your results, relieve your stress, and cause team morale to soar. Attract and retain the very best talent. Deal with difficult people problems in an objective and kind way. Overcome the reluctance we all share to confront under performers. Permanently solve the problems causing most of your stress.

“ Pfeffer [blends] academic rigor and practical genius into wonderfully readable text. One of the greatest minds in management theory and author or co-author of thirteen books, including the seminal business school text Managing With Power, Pfeffer shows readers how to succeed and wield power in the real world.

Taking a brass tacks approach to communication, How to Have Confidence and Power in Dealing With People explains how to interact with others as they really are, not as you would like them to be. The goal is to get what you want from them successfully — be it cooperation, goodwill, love or security. Les Giblin, a recognized expert in the field of human relations, has devised a method for dealing with people that can be used when relating with anyone — parents, teachers, bosses, employees, friends, acquaintances, even strangers. Giblin shows step by step how to get what you want at any time and in ways that leave you feeling good about yourself. Moreover, the people who have given you what you want wind up feeling good about

Democracy was born in Athens. From the city's founding myths to its golden age and chaotic downfall, this timely and well-informed political history is rich with lessons for contemporary America. Why did vital civic engagement and fair debate in Athens descend into populism and paralysis? Can we compare the demagogue Cleon to President Trump; the Athenian Empire to modern America; or the stubborn island of Melos to Brexit Britain? How did a second referendum save the Athenians from a bloodthirsty decision? Who were the last defenders of democracy in the changing, globalized world of the fourth century BC—and how do we unconsciously echo these leaders today? With verve and acuity, the heroics and the critics of Athenian democracy are brought to bear on today's politics, revealing in all its glories and its flaws the system that still survives to execute the power of the people.

Power to the People examines the varied but interconnected relationships between energy consumption and economic development in Europe over the last five centuries. It describes how the traditional energy economy of medieval and early modern Europe was marked by stable or falling per capita energy consumption, and how the First Industrial Revolution in the eighteenth century--fueled by coal and steam engines--redrew the economic, social, and geopolitical

map of Europe and the world. The Second Industrial Revolution continued this energy expansion and social transformation through the use of oil and electricity, but after 1970 Europe entered a new stage in which energy consumption has stabilized. This book challenges the view that the outsourcing of heavy industry overseas is the cause, arguing that a Third Industrial Revolution driven by new information and communication technologies has played a major stabilizing role. Power to the People offers new perspectives on the challenges posed today by climate change and peak oil, demonstrating that although the path of modern economic development has vastly increased our energy use, it has not been a story of ever-rising and continuous consumption. The book sheds light on the often lengthy and complex changes needed for new energy systems to emerge, the role of energy resources in economic growth, and the importance of energy efficiency in promoting growth and reducing future energy demand.
