In this assignment, you will use the three similar triangles in the diagram to prove that the Pythagorean Theorem works for all triangles. You will no longer have to take the word of others, you will prove it for yourself. First, take the three triangles in the diagram and arrange them so that corresponding sides are lined up.

A short equation, Pythagorean Theorem can be written in the following manner:  $a^2+b^2=c^2$ . In Pythagorean Theorem, c is the triangle's longest side while b and a make up the other two sides. The longest side of the triangle in the Pythagorean Theorem is referred to as the 'hypotenuse'. Many people ask why Pythagorean Theorem is important.

### Introduction To Pythagorean Theorem Assignment Answers

In mathematics, the Pythagorean theorem, also known as Pythagoras's theorem, is a fundamental relation in Euclidean geometry among the three sides of a right triangle. It states that the area of the square whose side is the hypotenuse (the side opposite the right angle) is equal to the sum of the areas of the squares on the other two sides.
