The Roots of Coincidence is a 1972 book by Arthur Koestler. It is an introduction to theories of parapsychology, including extrasensory perception and psychokinesis. Koestler postulates links between modern physics, their interaction with time and paranormal phenomena. It is influenced by Carl Jung's concept of synchronicity and the seriality of Paul Kammerer. In the book Koestler argues that science needs to take the possibility of the occurrence of phenomena that are outside our common sense v

Mickey Arthur's success story as a coach is no less than that of a dream figure after he succeeded Ray Jennings and made South African cricket a team of superstars. Surely he was helped by the rise of Dale Steyn, AB de Villiers and the success of Shaun Pollock, Jacques Kallis, Heschelle Gibbs ...

"Mr. Koestler's main concern is with demonstrating that, contrary to what one might expect- namely, that...paranormal events are most disturbing because they seem to break what most of us think are the laws of the real world- it is precisely modern physics that offers a "rapprochement" between the real world and parapsychology, even if the rapprochement is "negative in the sense that the unthinkable phenomena of ESP appear somewhat less preposterous in the light of the unthinkable propositions of physics." As Mr. Koestler so lucidly and wittily demonstrates, modern physics depicts a world of noncausational paradoxes- a wonderland of Heisenbergian Principles of Uncertainty, of mysterious elementary particles, of psi-fields, anti-electrons, multi-dimensionality, and time running forward and backward. And unlike Newton's clockwork universe, this new world is not at all uncongenial to the dice-shooter convinced that he has a "hot" hand or the sensitive who insists that his dreams are premonitory" -- by Christopher Lehmann-Haupt, New York Times, August 11, 1972.

"When we are alert to the coincidences in our lives, we experience them more frequently - and they take on greater significance. And once we recognize synchronicities as meaningful, they open us to new information, new possibilities. We suddenly find that we're in the right place at the right time, meet the right people at the right moment, and our lives are changed for the better." --From the Introduction There are signs everywhere, pointing the way to a better life, if you know how to read them. Signs are the stuff that synchronicity is made of - harness the power of synchronicity, and you can transform your life. In this groundbreaking book, bestselling authors Trish and Rob MacGregor reveal the seven secrets that allow you to recognize synchronicity when it happens - and make the most of it. You'll learn to interpret the meaning of the signs you encounter every day, and use such tools as the tarot, I-Ching, and astrology to understand your past, inform your present, and guide your future. Synchronicity - your key to making magic in your own life! In *The 7 Secrets of Synchronicity*, you'll see why there really is no such thing as coincidence - and how your life can be the better for it. Synchronicity is the universal language of transformation - and its secrets reveal how you can live a life rich in fulfillment and meaning and wonder. With this enlightening guide, you'll learn to read the signs all around you and transform your world - one amazing synchronicity at a time!

Our views on human nature are fundamental to the whole development, indeed the whole future, of human society. Originally published in 1974, Professor Thorpe believed that this was one of the most important and significant topics to which a biologist can address himself, and in this book he attempts a synthetic view of the nature of man and animal based on the five disciplines of physiology, ethology, genetics, psychology and philosophy. In a masterly survey of the natural order he shows the animal world as part of, yet distinct from, the inanimate world. He then treats aspects of the animal world which approach the human world in behaviour and capabilities, examining simple organisms, communications in vertebrates and invertebrates, innate behaviour versus acquired behaviour, and animal perception. In the second part of the book he deals with those aspects of human nature for which there is no analogy and which constitute man's uniqueness - his consciousness of his past, his awareness of his future and his desire to understand the meaning of his existence. The primary facts which demonstrate the importance of this book arise from the ever-growing power of man over his environment and his apparent inability to foresee and cope with the dangers of uncontrolled population growth on the one hand and the wildly irrational waste and degradation of the natural resources of the world on the other. Professor Thorpe believes that an immense responsibility lies with literate men of good will, particularly scientists, to convince man that he is the spearhead and custodian of a stupendous evolutionary process. *Animal Nature and Human Nature* integrates

scientific fact with sound theological thought in an attempt to fulfil, in a manner previously impossible Pascal's injunction that: 'It is dangerous to show man too clearly how much he resembles the beast without at the same time showing him his greatness. It is also dangerous to allow him too clear a vision of his greatness without his baseness. It is even more dangerous to leave him in ignorance of both. But it is very profitable to show him both.'
