System 1 is fast, intuitive, and emotional; System 2 is slower, more deliberative, and more logical. The impact of overconfidence on corporate strategies, the difficulties of predicting what will make us happy in the future, the profound effect of cognitive biases on everything from playing the stock market to planning our next vacation—each of these can be understood only by knowing how the two systems shape our judgments and decisions. Engaging the reader in a lively conversation about how we think, Kahneman reveals where we can and cannot trust our intuitions and how we can tap into the benefits of slow thinking. He offers practical and enlightening insights into how choices are made in both our business and our personal lives—and how we can use different techniques to guard against the mental glitches that often get us into trouble. Winner of the National Academy of Sciences Best Book Award and the Los Angeles Times Book Prize and selected by The New York Times Book Review as one of the ten best books of 2011, *Thinking, Fast and Slow* is destined to be a classic.

Decisions: You make hundreds every day, but do you really know how they are made? When can you trust fast, intuitive judgment, and when is it biased? How can you transform your thinking to help avoid overconfidence and become a better decision maker? *Thinking, Fast and Slow ...in 30 Minutes* is the essential guide to quickly understanding the fundamental components of decision making outlined in Daniel Kahneman's bestselling book, *Thinking, Fast and Slow*. Understand the key ideas behind *Thinking, Fast and Slow* in a fraction of the time: Concise chapter-by-chapter synopses Essential insights and takeaways highlighted Illustrative case studies demonstrate Kahneman's groundbreaking research in behavioral economics In *Thinking, Fast and Slow*, Daniel Kahneman, best-selling author and recipient of the Nobel Prize in Economics, has compiled his many years of groundbreaking research to offer practical knowledge and insights into how people's minds make decisions. Challenging the standard model of judgment, Kahneman aims to enhance the everyday language about thinking to more accurately discuss, diagnose, and reduce poor judgment. Thought, Kahneman explains, has two distinct systems: the fast and intuitive System 1, and the slow and effortful System 2. Intuitive decision making is often effective, but in *Thinking, Fast and Slow* Kahneman highlights situations in which it is unreliable—when decisions require predicting the future and assessing risks. Presenting a framework for how these two systems impact the mind, *Thinking, Fast and Slow* reveals the far-reaching impact of cognitive biases—from creating public policy to playing the stock market to increasing personal happiness—and provides tools for applying behavioral economics toward better decision making. For use in schools and libraries only. A Nobel Prize-winning psychologist draws on years of research to introduce his "machinery of the mind" model on human decision-making to reveal the faults and capabilities of intuitive versus logical thinking, providing insights into such topics as optimism, the unpredictability of happiness and the psychological pitfalls of risk-taking.

Thinking, Fast and Slow by Daniel Kahneman offers a general audience access to over six decades of insight and expertise from a Nobel Laureate in an accessible and interesting way. Kahneman's work focuses largely on the problem of how we think, and warns of the dangers of trusting to intuition — which springs from “fast” but broad and emotional thinking — rather than engaging in the slower, harder, but surer thinking that stems from logical, deliberate decision-making. Written in a lively style that engages readers in the experiments for which Kahneman won the Nobel, *Thinking, Fast and Slow*'s real triumph is to force us to think about our own thinking.

So much to read, so little time? This brief overview of *Thinking, Fast and Slow* tells you what you need to know—before or after you read Daniel Kahneman's book. His award-winning book explains the different ways people think, whether they're deciding how to invest their money or how to make friends. Kahneman's experiments in behavioral economics, in collaboration with cognitive psychologist Amos Tversky, led to a theory of two systems of thought: the fast thinking used when ducking a blow, and slow thinking that's better employed for making major life decisions. Applying these psychological concepts to different facets of our lives, Kahneman demonstrates how to better understand your own decision-making, and the choices made by others. The summary and analysis in this ebook are intended to complement your reading experience and bring you closer to great work of nonfiction.

In recent research, dual-process theories of cognition have been the primary model for explaining moral judgment and reasoning. These theories understand moral thinking in terms of two separate domains: one deliberate and analytic, the other quick and instinctive. This book presents a new theory of the philosophy and cognitive science of moral judgment. Hanno Sauer develops and defends an account of "triple-process" moral psychology, arguing that moral thinking and reasoning are only insufficiently understood when described in terms of a quick but intuitive and a slow but rational type of cognition. This approach severely underestimates the importance and impact of dispositions to initiate and engage in critical thinking — the cognitive resource in charge of counteracting my-side bias, closed-mindedness, dogmatism, and breakdowns of self-control. Moral cognition is based, not on emotion and reason, but on an integrated network of intuitive, algorithmic and reflective thinking. *Moral Thinking, Fast and Slow* will be of great interest to philosophers and students of ethics, philosophy of psychology and cognitive science.

Renowned psychologist and winner of the Nobel Prize in Economics Daniel Kahneman shows us how the mind has two systems that drive how we think. In *Thinking, Fast and Slow*, the first system—System

1—is the fast, intuitive, and emotional system while the second system—System 2—is the slower, more deliberate, and logical system. Kahneman shows the impact of overconfidence in making decisions, the difficulties of predicting happiness in the future, and the profound effect of having cognitive biases. These can be understood based on how the two systems control our judgments and decisions. Kahneman shows us when our intuitions can be helpful and when it can't as well as how we can get the benefits of slow thinking. He gives us practical insights into how we make our choices both in business and in our personal lives as well as what techniques we can use in order to protect ourselves against the lapses that can cause us trouble. Given the National Academy of Sciences Best Book Award, the Los Angeles Times Book Prize, and The New York Times Book Review as one of the ten best books of 2011, Thinking, Fast and Slow is a book that would certainly affect how we think and how we live our lives. Thinking, Fast and Slow - A Complete and Detailed Summary! The first chapter begins with Daniel Kahneman's description of two main characters of the book, neither of which are people. He refers to something that he calls System 1 and System 2. System 1 is dedicated to thinking fast. It almost solely relies on intuition and almost entirely disregards information. System 1 is in control every time we do an activity that requires quick thinking and reactions. For example, System 1 is in control when we drive, when we want to read other people's facial expressions, when we answer to questions that require quick answers, etc. Kahneman states that System 1 is involuntary and operates entirely on its own. System 2 thinks slowly and always relies on information and almost never on intuition. System 2 is in control when we try to solve difficult math problem, when we want to focus our attention on the voice of person in a room full of people, when we fill in tax forms, or during any other events that are based on awareness. System 2 requires energy, because it operates voluntarily. “ Brilliant. . . Lewis has given us a spectacular account of two great men who faced up to uncertainty and the limits of human reason. ” —William Easterly, Wall Street Journal Forty years ago, Israeli psychologists Daniel Kahneman and Amos Tversky wrote a series of breathtakingly original papers that invented the field of behavioral economics. One of the greatest partnerships in the history of science, Kahneman and Tversky's extraordinary friendship incited a revolution in Big Data studies, advanced evidence-based medicine, led to a new approach to government regulation, and made much of Michael Lewis's own work possible. In *The Undoing Project*, Lewis shows how their Nobel Prize – winning theory of the mind altered our perception of reality.
