A Unix shell is a command-line interpreter or shell that provides a command line user interface for Unix-like operating systems. The shell is both an interactive command language and a scripting language, and is used by the operating system to control the execution of the system using shell scripts. Users typically interact with a Unix shell using a terminal emulator; however, direct operation via serial hardware connections or Secure Shell are common for server systems. All Unix shells provide

A shell script is a computer program designed to be run by the Unix shell, a command-line interpreter. The various dialects of shell scripts are considered to be scripting languages. Typical operations performed by shell scripts include file manipulation, program execution, and printing text. A script which sets up the environment, runs the program, and does any necessary cleanup, logging, etc. is called a wrapper. The term is also used more generally to mean the automated mode of running an ope

Shell script - Wikipedia
Shell Programming in Unix, Linux and OS X is a thoroughly updated revision of Kochan and Wood's classic Unix Shell Programming tutorial.Following the methodology of the original text, the book focuses on the POSIX standard shell, and teaches you how to develop programs in this useful programming environment, taking full advantage of the underlying power of Unix and Unix-like operating systems.

Unix and Shell Scripting Training | Udemy
Shell Scripting Tutorial. This tutorial is written to help people understand some of the basics of shell script programming (aka shell scripting), and hopefully to introduce some of the possibilities of simple but powerful programming available under the Bourne shell.As such, it has been written as a basis for one-on-one or group tutorials and exercises, and as a reference for subsequent use.

The Shell Scripting Tutorial
UNIX Shell is a collection of computer operating systems that allow

multiple users to do multiple tasks. A shell is a medium provided to interact with the kernel which is a Command Line Interface (CLI) to the Unix system. It is basically a command-line interface to the Unix system. It works by gathering the input from the users, executing the program based on the input from the users and then displaying the output after the execution of the program.
