The ILO Value Chain Development approach looks at market dynamics and relationships between the different actors in the chain with the objective of strengthening the whole market system - enterprises, business relationships, financial networks, supporting functions, rules and norms, and the business environment - in a way that ensures greater benefits for the poor from economic growth and development. This "Rough Guide to Value Chain Development" has been developed in collaboration with the DANIDA funded Responsible Business programme in Myanmar to give a simplified overview of the Value Chain Development approach as applied by the International Labour Organization (ILO).

""Brings together a set of studies of labour conditions in GVCs - in labour-intensive sectors, medium- and high-technology sectors and knowledge-intensive sectors"--Provided by publisher"--

Economic, technological, and political shifts as well as changing business strategies have driven firms to unbundle production processes and disperse them across countries. Thanks to these changes, developing countries can now increase their participation in global value chains (GVCs) and thus become more competitive in agriculture, manufacturing and services. This is a paradigm shift from the 20th century when countries had to build the entire supply chain domestically to become competitive internationally. For policymakers, the focus is on boosting domestic value added and improving access to resources and technology while advancing development goals. However, participating in global value chains does not automatically improve living standards and social conditions in a country. This requires not only improving the quality and quantity of production factors and redressing market failures, but also engineering equitable distributions of opportunities and outcomes - including employment, wages, work conditions, economic rights, gender equality, economic security, and protecting the environment. The internationalization of production processes helps with very few of these development challenges. Following this perspective, Making Global Value Chains Work for Development offers a strategic framework, analytical tools, and policy options to address this challenge. The

book conceptualizes GVCs and makes it easier for policymakers and practitioners to discuss them and their implications for development. It shows why GVCs require fresh thinking; it serves as a repository of analytical tools; and it proposes a strategic framework to guide policymakers in identifying the key objectives of GVC participation and in selecting suitable economic strategies to achieve them.

This book focuses on the changing gender patterns of work in a global retail environment associated with the rise of contemporary retail and global sourcing. This has affected the working lives of hundreds of millions of workers in high-, middle- and low-income countries. The growth of contemporary retail has been driven by the commercialised production of many goods previously produced unpaid by women within the home. Sourcing is now largely undertaken through global value chains in low- or middle-income economies, using a 'cheap' feminised labour force to produce low-price goods. As women have been drawn into the labour force, households are increasingly dependent on the purchase of food and consumer goods, blurring the boundaries between paid and unpaid work. This book examines how gendered patterns of work have changed and explores the extent to which global retail opens up new channels to leverage more gender-equitable gains in sourcing countries.

Studies conceptual foundations of GVC analysis, twin pillars of 'governance' and 'upgrading', and detailed cases of emerging economies.

Award-winning book showcases case studies uncovering the exploitation of labor and class in the Global South Winner of the 2018 Paul M. Sweezy—Paul A. Baran Memorial Award for original work regarding the political economy of imperialism, Value Chains examines the exploitation of labor in the Global South. Focusing on the issue of labor within global value chains, this book offers a deft empirical analysis of unit labor costs that is closely related to Marx ' s own theory of exploitation. Value Chains uncovers the concrete processes through which multinational corporations, located primarily in the Global North, capture value from the Global South. We are brought face to face with various state-of-the-art corporate strategies that enforce “ economical ” and “ flexible ” production, including labor management methods, aimed to reassert the imperial dominance of the North, while continuing the dependency of the Global South and polarizing the global economy. Case studies of Indonesian suppliers exemplify the growing burden borne by the workers of the Global South, whose labor creates the surplus value that enriches the capitalists of the North, as well as the secondary capitals of the South. Today, those who control the value chains and siphon off the profits are primarily financial interests with vast economic and political power—the power that must be broken if the global working class is to liberate itself. Suwandi ' s book depicts in concrete detail the relations of unequal exchange that structure today ' s world economy. This study, up-to-date and richly documented, puts labor and class back at the center of our understanding of the world capitalist system.

Globalization of production has created opportunities and challenges for developing country producers and workers. This volume provides solutions-oriented approaches for promoting improved working conditions and labour rights in the apparel industry.

It is the first output of the work of the United Nations Value Chain Development group (UN-VCD group). Outlines the different approaches and perspectives that seven UN agencies apply in their work on value chain development. The agencies involved are : the Food and Agriculture Organization (FAO), the International Fund for Agricultural Development (IFAD), the International Labour Organization (ILO), the International Trade Centre (ITC), the United Nations Conference on Trade and Development (UNCTAD), the United Nations Development Programme (UNDP) and the United Nations Industrial Development Organization (UNIDO). The United Nations Economic Commission for Europe (UNECE) and the United Nations Capital Development Fund (UNCDF) have also added descriptions of the role they play. Points to some of the challenges the UN system is facing in enhancing its effectiveness and coherence and offers some initial thoughts on how the UN system could leverage its strengths in value chain development.
