Valve stem seals provide a defined metering rate of oil to the valve stem interface of internal combustion engines to lubricate the valve guide and minimize engine emissions. They are available for diesel and gasoline engines with and without boosting. In addition to conventional valve stem seals, our offer also includes valve stem seals for engines with high pressures in the manifolds, e.g. because of turbo chargers or for exhaust brakes on commercial engines.

Valve stem seals - redirects.skf.com
Valve stem seals are devices that are engineered to allow a small amount of oil to pass through their lips (oil-metering) to lubricate the valve stem / valve guide interface of an engine. If too much oil passes through the lip of the seal, emissions are worsened and coke builds up on the valve, potentially causing the engine to lose power or even fail.

SKF Valve stem seals
SKF offers new designs of high-pressure valve stem seals, providing minimized guide wear and cost savings in the engine blow-by management: Lower risk of valve stem scuffing and guide wear as oil lubrication remains stable under pressure; Reduced blow-by gas volume as the seals do not allow air flow to the top of the cylinder head

High pressure valve stem seals In addition to conventional valve stem seals, SKF has developed a new generation of valve stem seals for high pressure applications. These seals improve the quality of emissions and enhance engine operation by withstanding high pressures in the exhaust and intake ports of the engine, while maintaining their primary function as an oil metering device.
