This book is a comprehensive study of the development of China ' s nuclear-powered ballistic missile submarines (SSBNs). It offers insights into the secretive world of nuclear submarines and ballistic missiles of the Chinese (PLA) Navy and studies how these are likely to grow in the next two decades. The volume examines the technological origins of the design and development of Chinese nuclear submarines, ballistic missiles, and their naval construction capabilities. It provides an analysis of the underlying Chinese nuclear doctrine, China ' s maritime geographical constraints for submarine operations, and the credibility of its sea-based deterrence. It draws upon strategy, nuclear policy, technology, geography, and operational considerations to holistically predict the likely SSBN force levels of the PLA Navy for various scenarios. The book also assesses the spectrum of threats likely from the undersea domain for India and other nations in the Indo-Pacific region. A key text on an obscure but vital facet of Chinese defence studies, this book will be useful for scholars and researchers of strategic affairs, international relations and disarmament studies, peace and conflict studies, geopolitics, foreign policy, Indo-Pacific studies, and diplomacy.

First published in 1942, this dictionary was designed to help civilians and members of H.M. forces to make their way amid the jungle of wartime abbreviations. The preface notes that newspaper readers, sailors, soldiers and airmen had to thrust themselves, like explorers, into these abbreviations in search of truth, or the execution of their martial duty and hence, a dictionary was necessary. This book will be of interest to scholars of history and language, as well as the more general, interested reader.
