Mazda GBLSD Valve Collection Other AC/VP1 exhibits. The AC/VP1 is a variable μ screened pentode designed for mains radio receivers. The variable μ characteristic enables automatic gain control of RF and IF amplifiers in superhet receivers. The AC/VP1 and AC/VP2 were the standard RF/IF screened pentodes in the Mazda range for AC mains radios from the mid-1930s until domestic radio manufacture was interrupted by WWII.

The Mazda AC/Pen was the landmark valve whose design overcame these difficulties at low cost and without causing other problems. The relatively low heater power (4 W) and the generous anode diameter contributed to its success. The above advertisement uses the AC/PEN as its example of quality. Many original AC/PEN's survive in good working order.

A thermal expansion valve or thermostatic expansion valve is a component in refrigeration and air conditioning systems that controls the amount of refrigerant released into the evaporator and is intended to regulate the superheat of the vapor leaving the evaporator. Although often described as a "thermostatic" valve, an expansion valve does not regulate temperature, the temperature of the evaporator will vary with the evaporation pressure. The superheat is the excess temperature of the vapor abo
